

Introduction to the **FORENSIC EXPERIENTIAL TRAUMA INTERVIEW**

Learn how to interview victims using the only interview method specifically recognizing neuroscience research and the research on memories formed during highly stressful and traumatic events.

Featuring Expert Instruction By Founder

Russell Strand
and
Dr. Christopher Wilson

The Forensic Experiential Trauma Interview© enables effective evidence gathering, reduces the inaccuracy of the information gathered during an interview and greatly enhances the understanding of the traumatized person's experience. Key to this interview method is the neurobiology of trauma, which enables investigators to understand how victims, due to automatic reactions by their brains, actually experienced their assaults and recorded them into memory.

Two days of instruction on:

- **The Forensic Experiential Trauma Interview Technique**
- **Best Practices when Working with Trauma Victims**
- **Normal and Brain-Based but Commonly Misunderstood Sexual Assault Experiences and Behaviors**
- **The Neurobiology of Traumatic Memory**
- **Key Principles of Memory Encoding, Storage and Retrieval**

See website for complete areas of instruction

CLICK HERE TO REGISTER or visit the law enforcement portal at www.ReportingOptions.org for more information. **Registration fee of \$395.00 includes two days of training and all materials.**

Hosted by the Women's Fund of Omaha

Facilitated by the You
Have Options Program

**Warde Conference Center
Omaha, NE**

December 19 - 20, 2017

REGISTRATION DEADLINE: December 1st
